

OLATIGBE OLADIPUPO

Full-Stack Developer (Laravel Backend Specialist)

Lagos, Nigeria | +234 704 029 9428 | olatigbejoel15@gmail.com | github.com/olatigbejoel15

PROFESSIONAL SUMMARY

Full-stack developer specializing in Laravel backend engineering, with hands-on experience designing and securing RESTful APIs, structuring relational databases, and integrating modern frontend systems. Currently building PrimeWears, a production-grade Laravel 12 e-commerce API featuring UUID-based authentication, role-based access control, and third-party media management. Strong foundation in MVC architecture, token-based authentication, and API testing.

TECHNICAL SKILLS

Backend: PHP, Laravel (incl. Laravel 12), Laravel Sanctum, RESTful API Design, MVC Architecture

Frontend: JavaScript, React, HTML5, CSS3, Tailwind CSS, Bootstrap

Database: MySQL, Eloquent ORM, Database Design & Optimization

Tools & Practices: Git/GitHub, Postman, CI/CD, Cloudinary Integration, ngrok, Artisan/Tinker, Debugging & Error Handling

Other: API Authentication & Security, Automated Testing, Deployment & Hosting

PROFESSIONAL EXPERIENCE

Laravel Backend Developer Intern — Freshmind Dev

Lagos, Nigeria | 2023 – 2024

- Supported backend development on client projects using Laravel and MySQL, contributing to API endpoints, database structures, and feature implementation.
- Assisted in building and maintaining RESTful APIs, including authentication and CRUD functionality, under guidance from senior developers.
- Participated in code reviews, debugging sessions, and version control workflows using Git, strengthening foundational backend engineering practices.

Backend Developer — Freelance / Independent Practice

Lagos, Nigeria | August 2024 – Present

- Designed and built RESTful APIs in Laravel and MySQL, implementing authentication, CRUD operations, and data validation in line with Laravel best practices.
- Currently developing PrimeWears, a Laravel 12 e-commerce API for a gym-wear retailer, covering order management, UUID-compatible authentication via Sanctum, Cloudinary-based media handling, and admin role scoping.
- Built a comprehensive automated test suite covering authentication, categories, products, and orders to ensure backend reliability.
- Integrated frontend applications (including React) with Laravel backends, resolving CORS and cross-origin issues for smooth client-server communication.
- Used Postman and Tinker for API testing and debugging; managed version control and collaboration through Git/GitHub.
- Expanding skill set into NestJS and TypeScript to broaden full-stack backend capability.

KEY PROJECTS

PrimeWears — E-Commerce API (Laravel 12)

2025 – Present

- Architected a scalable Laravel 12 e-commerce backend for a gym-wear retailer, covering product, category, and order management with UUID-based primary keys.
- Implemented secure, token-based authentication using Laravel Sanctum, resolving UUID compatibility issues, and built admin role scoping for protected operations.
- Built a full order management system handling order creation, status tracking, and processing logic.
- Integrated Cloudinary for product image storage, including bulk asset management, upload validation, and product seeding using Cloudinary and Unsplash sources.

- Configured CORS to support a React frontend collaborator, enabling secure cross-origin communication between client and API.
- Optimized product endpoints with eager loading to reduce N+1 query issues and improve API response performance.
- Developed a multi-suite automated test coverage spanning authentication, categories, products, and orders to ensure backend reliability.
- Used Postman, Artisan Tinker, and ngrok for local API testing, debugging, and tunneling during collaborative development.
- Conducted security-focused testing on the API to identify and address vulnerabilities ahead of production readiness.

Logistics API

2025

- Developed a secure RESTful API for a logistics platform using token-based authentication (Laravel Sanctum) with structured routes, controllers, and models built for scalability.
- Designed database schemas to support shipment tracking and delivery-related data, applying Laravel's Eloquent ORM for relational data management.
- Implemented request validation and error handling to ensure data integrity across API endpoints.
- Tested endpoints extensively with Postman to confirm correct authentication flows and response structures.

Mini E-Commerce API

2025

- Built a RESTful API supporting product management, user authentication, and order processing, with full CRUD operations and secure token-based authentication.
- Structured controllers and models following MVC architecture to keep business logic organized and maintainable.
- Handled JSON response formatting and standardized API outputs for consistent client-side consumption.
- Implemented order processing logic, linking products, users, and orders through relational database design.

EDUCATION

Higher National Diploma (HND), Nutrition and Dietetics

Rufus Giwa Polytechnic, Owo, Ondo State, Nigeria — 2022
